

setCombatRoles

An eventCall to assign roles to idAI2 in an idEncounterManager.

Usage

```
item[0] = {
  eventCall = {
    eventDef = "setCombatRoles";
    args = {
      num = 3;
      item[0] = {
        eEncounterSpawnType_t = ""; // spawnType
      }
      item[1] = {
        string = ""; // group_label
      }
      item[2] = {
        encounterGroupRole_t = ""; // group_role
      }
    }
  }
}
```

- `spawnType` are the `eEncounterSpawnType_t` that you want to give a role.
- `group_label` is the label for the ai be given a role by this eventCall. This parameter is optional, and can be left blank.
- `group_role` is the `encounterGroupRole_t` (combat role) that you wish to give to the specified ai.

Example Usage

```
item[0] = {
  eventCall = {
    eventDef = "spawnSingleAI";
```

```

    args = {
    num = 3;
    item[0] = {
    eEncounterSpawnType_t = "ENCOUNTER_SPAWN_MANCUBUS";
    }
    item[1] = {
    entity = "ai_target_spawn_454";
    }
    item[2] = {
    string = "defender";
    }
    }
    item[1] = {
    eventCall = {
    eventDef = "setCombatRoles";
    args = {
    num = 3;
    item[0] = {
    eEncounterSpawnType_t = "ENCOUNTER_SPAWN_ANY"; // spawnType
    }
    item[1] = {
    string = "defender"; // group_label
    }
    item[2] = {
    encounterGroupRole_t = "ROLE_DEFEND"; // group_role
    }
    }
    }
    }
}

```

In this example, a Mancubus is spawned with the label `defender` , and then `setCombatRoles` is used to set any ai type with the `defender` label to `ROLE_DEFEND` .
