Commands (CMD)

> Console Commands are unlocked by default after running the **Eternal Mod Injector**.

How to Use the Command Console

- Press the **Grave Accent** (`) key on your keyboard to open the console.
- You may type any command in the terminal prompt, but you cannot control your character while the console is open. After you have typed your desired command, press **Enter** to execute it.
- Press the (`) key again to exit the Command Console.

> Opening the Command Console does **not** pause the game.

> Commands are **not** case-sensitive.

Common Console Commands

> If you are having trouble finishing a command, select **TAB** and the console with display available parameters.

Command	Information	Example
listcmds	Lists all of the available console commands.	`listcmds`
bind	Binds a command to a specific key.	`bind del killai`
unbind	Unbinds a command from a key.	`unbind del`
kill	Instantly kills the player once, consuming an Extra Life if one is present.	`kill`

god	Makes the player invulnerable to damage. This command is toggle-able by itself.	`god`

give	Gives the player resources in full capacity or adds an item to the player's inventory.	`give health`
		`give armor`
		`give ammo`

gibalicious	Instantly gibs all AI present in the level.	`gibalicious`
removeInventoryItem	Removes an item for the player's inventory.	`removeInventoryItem weapon/player/bfg`
disconnect	Automatically disconnects you from a multiplayer match.	`disconnect`
warning_disable	Disables console warnings that are displayed in red text.	`warning_disable all`

> None of these commands require **Meath00k**. However, should you need **noclip** or **notarget** enabled, you must have **XINPUT1_3.dll** downloaded and placed into your DOOM Eternal installation folder.
> ex: **C:\Program Files (x86)\Steam\steamapps\common\DOOMEternal**
